# Introducción

Fiebre mayor a 38°C  
Cefalea

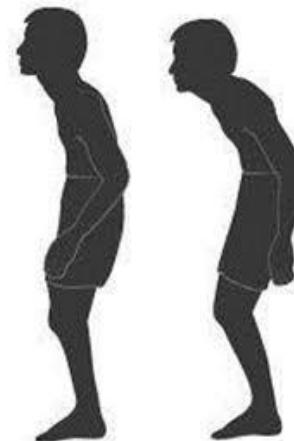

Erupciones  
cutáneas

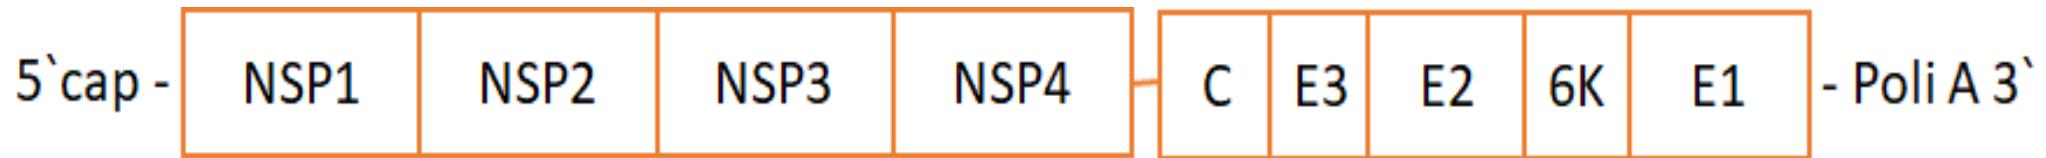

Dolores  
articulares

# Signos y síntomas

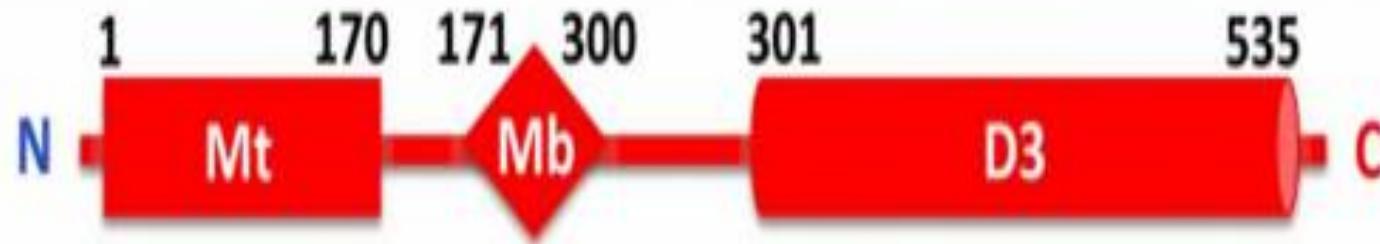

# Estructura viral

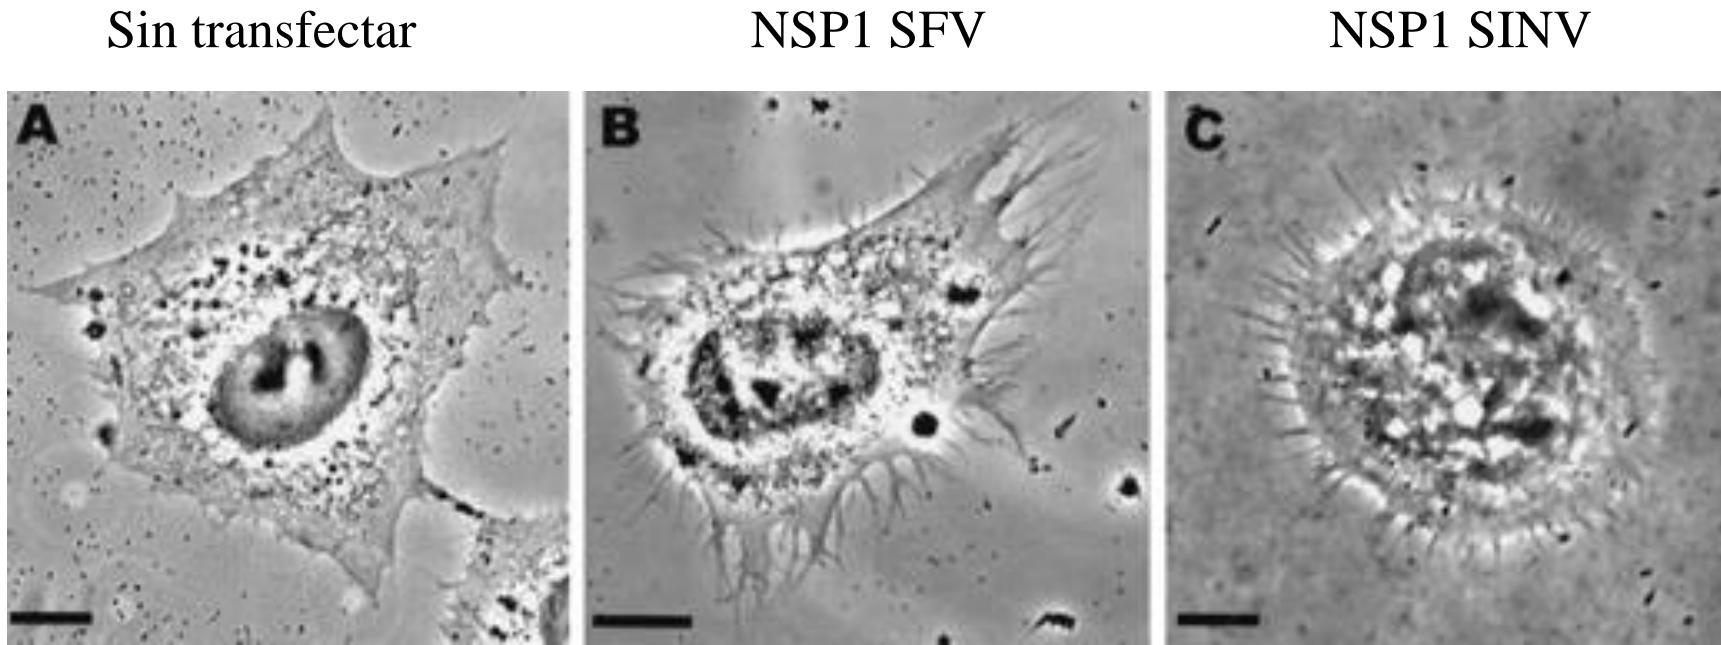

Tres dominios:

- Dominio N-terminal metiltransferasa (Mt)
- Dominio de unión a la membrana (Mb)
- Dominio C-terminal (D3).

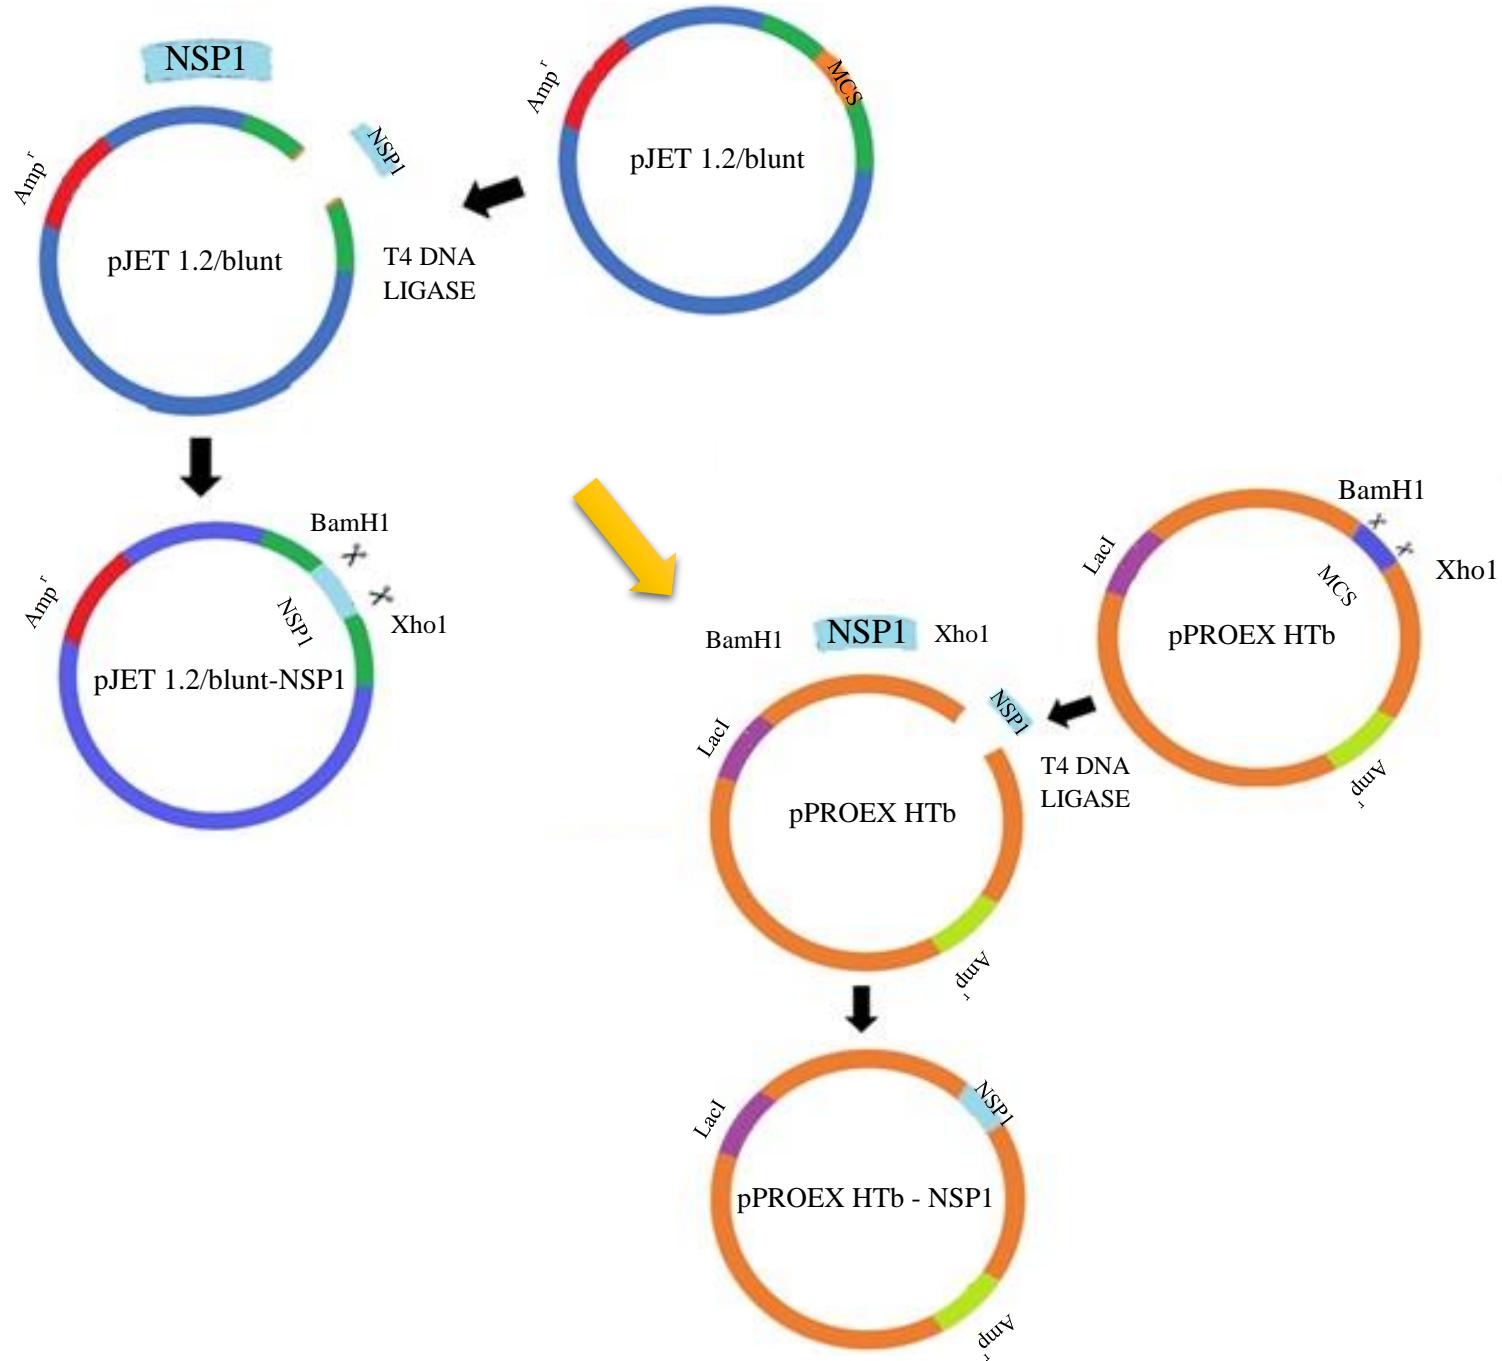

# Modificaciones por NSP1 en Alfavirus

Células  
HeLa

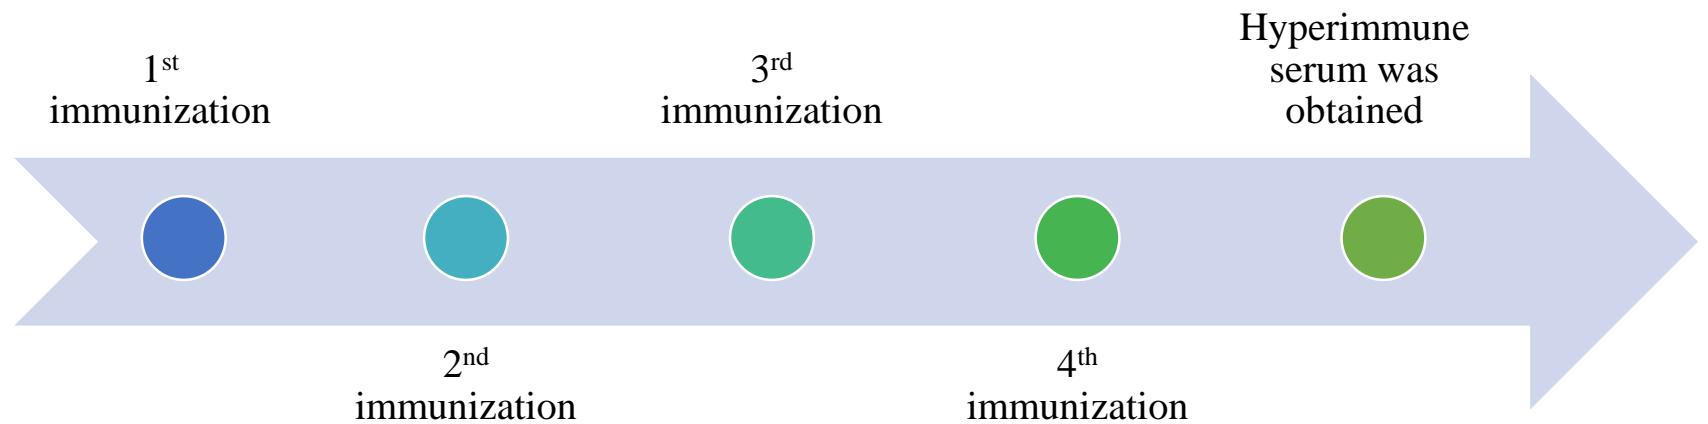

# Metodología

Representación esquemática de la estrategia general de clonación para los vectores pJET1.2 y pPROEX Htb y la construcción final pPROEX HTb-NSP1 flanqueada por sitios de restricción para *BamHI* y *XhoI*.

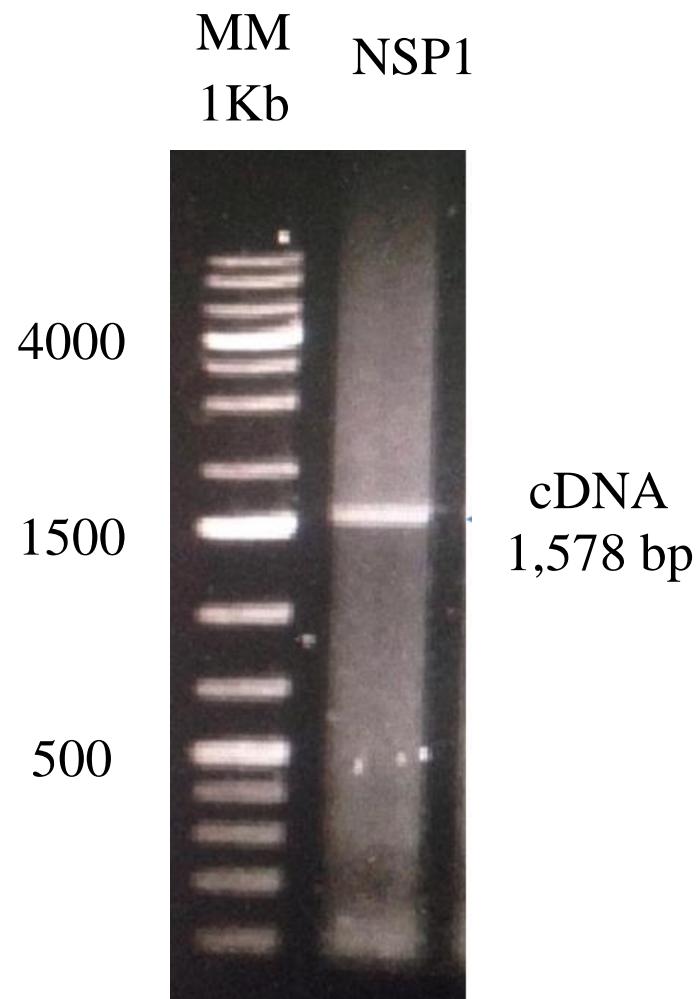

# Protocolo de inmunización de ratas Wistar y evaluación del suero hiperinmune por inmunofluorescencia

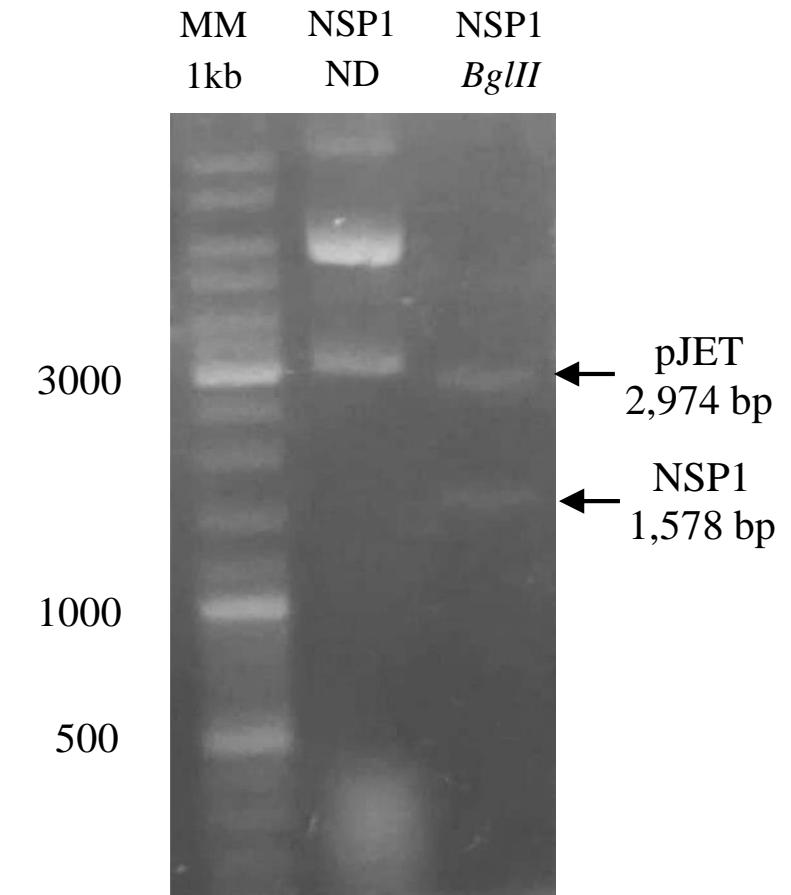

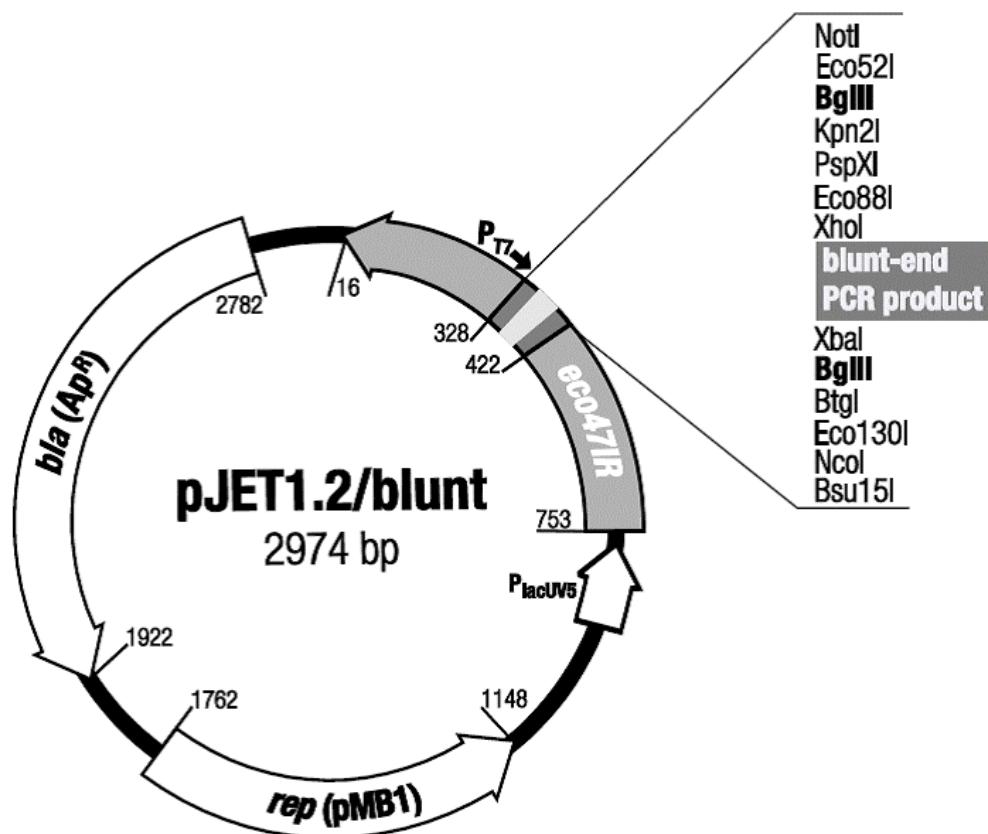

# Resultados

NSP1 RT-PCR electropherogram. The NSP1 sequence was amplified using the forward 5'-CGC-GGA-TCC-ATG-GAT-TCT-GTG-TAC-3' and the reverse primer 5'-CTA-TCT-CGA-CCA-CGA-GAG-CTC-GAA-3', which were flanked by the *BamHI* and *XhoI* restriction sites, respectively.

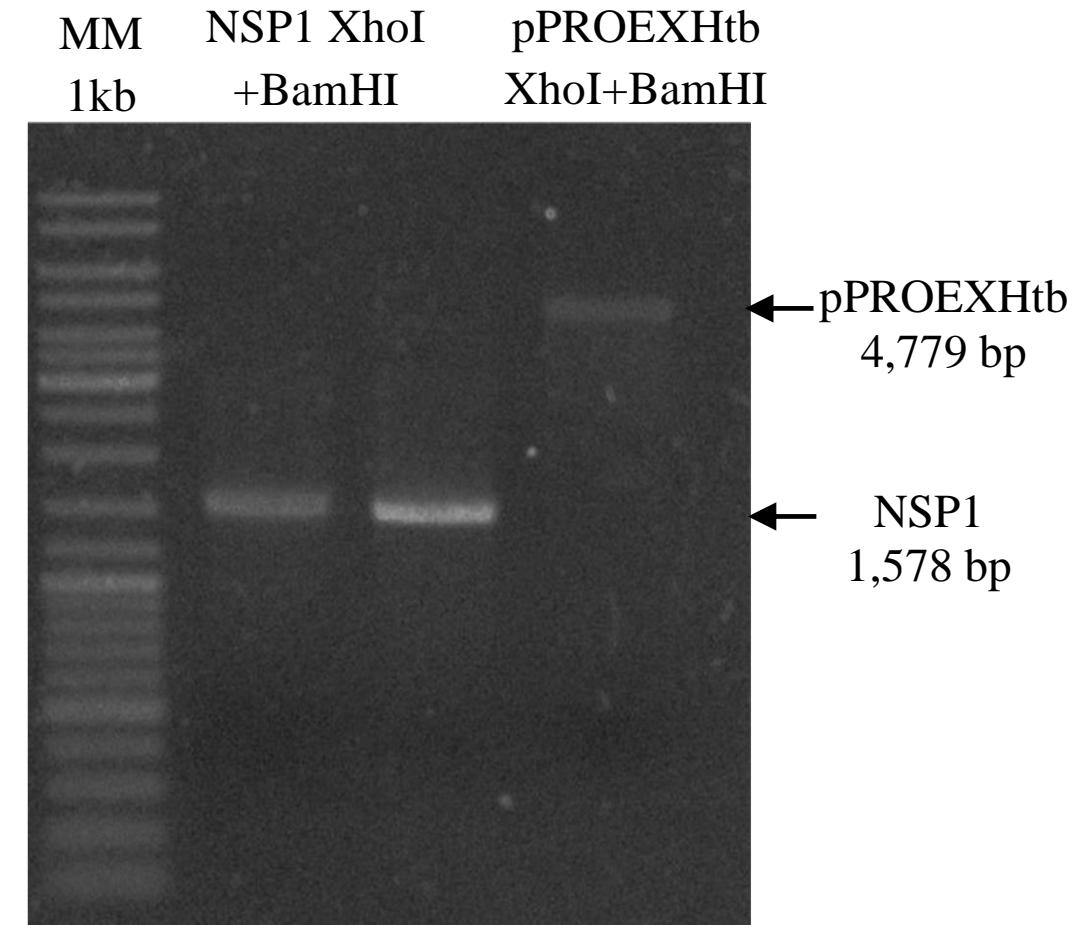

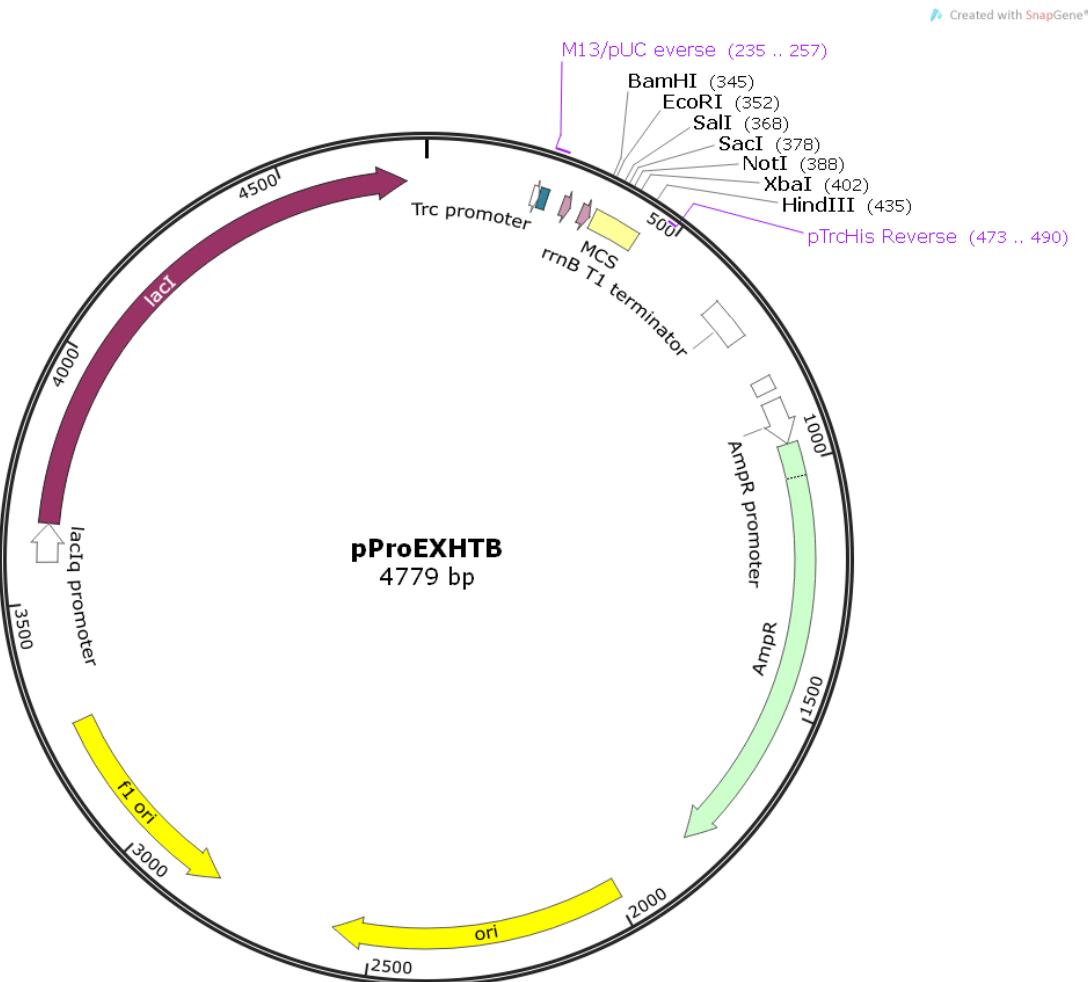

Clonación de la secuencia codificante de la NSP1 en el vector de transferencia pJET.

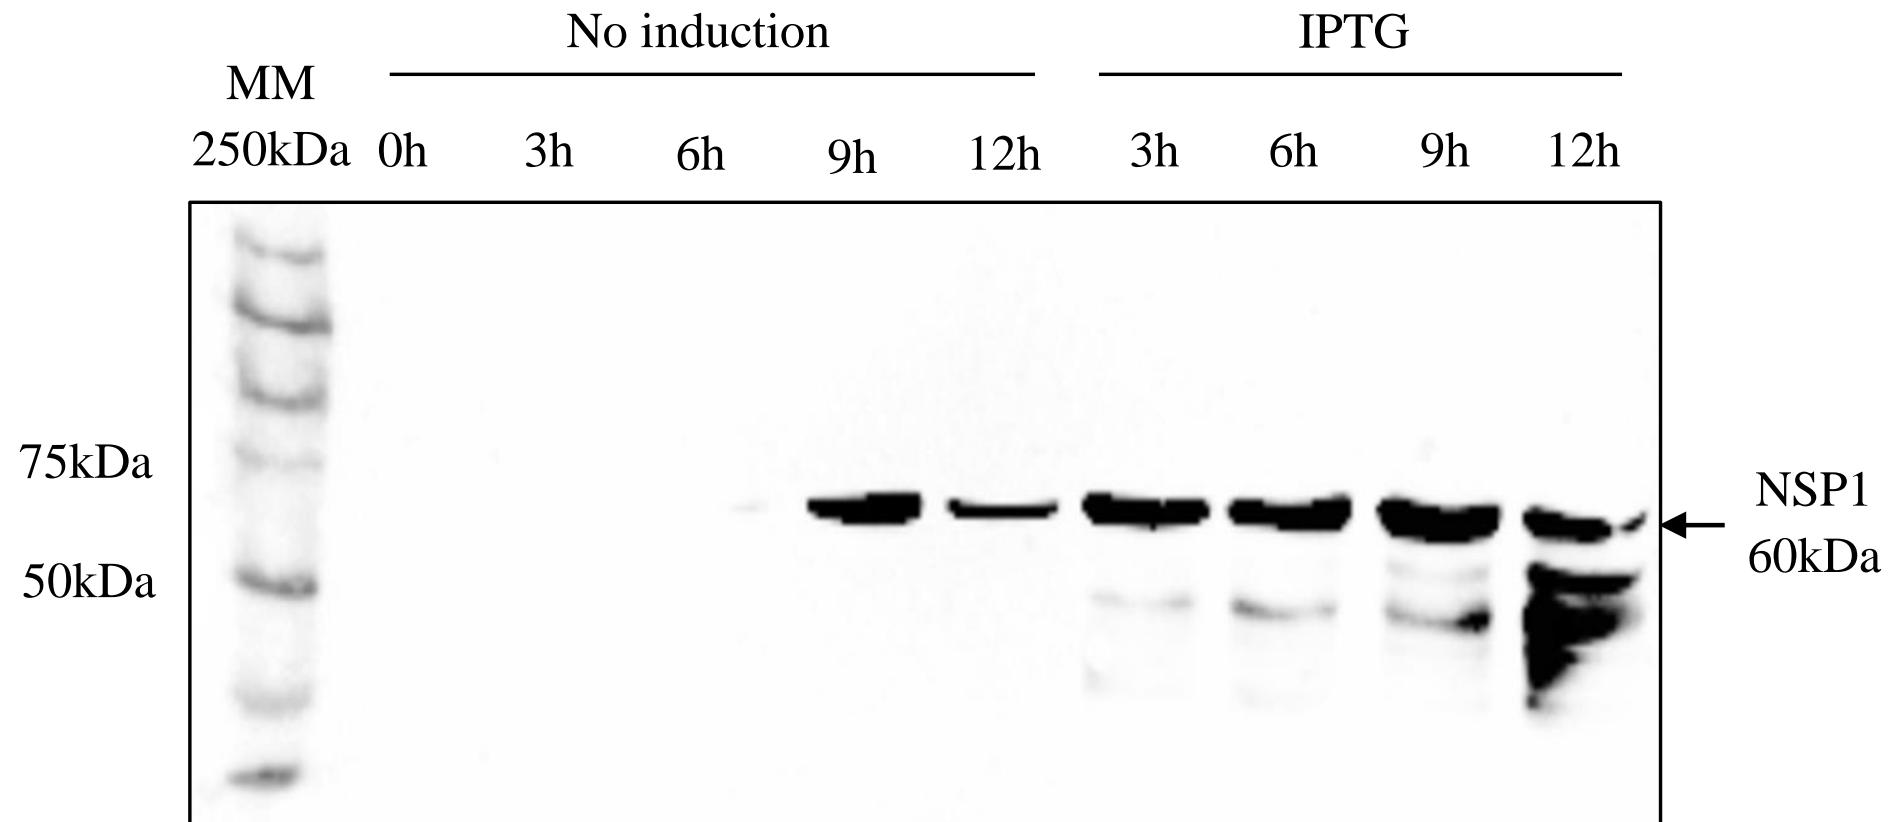

### Electroferograma de la restricción pJET- NSP1

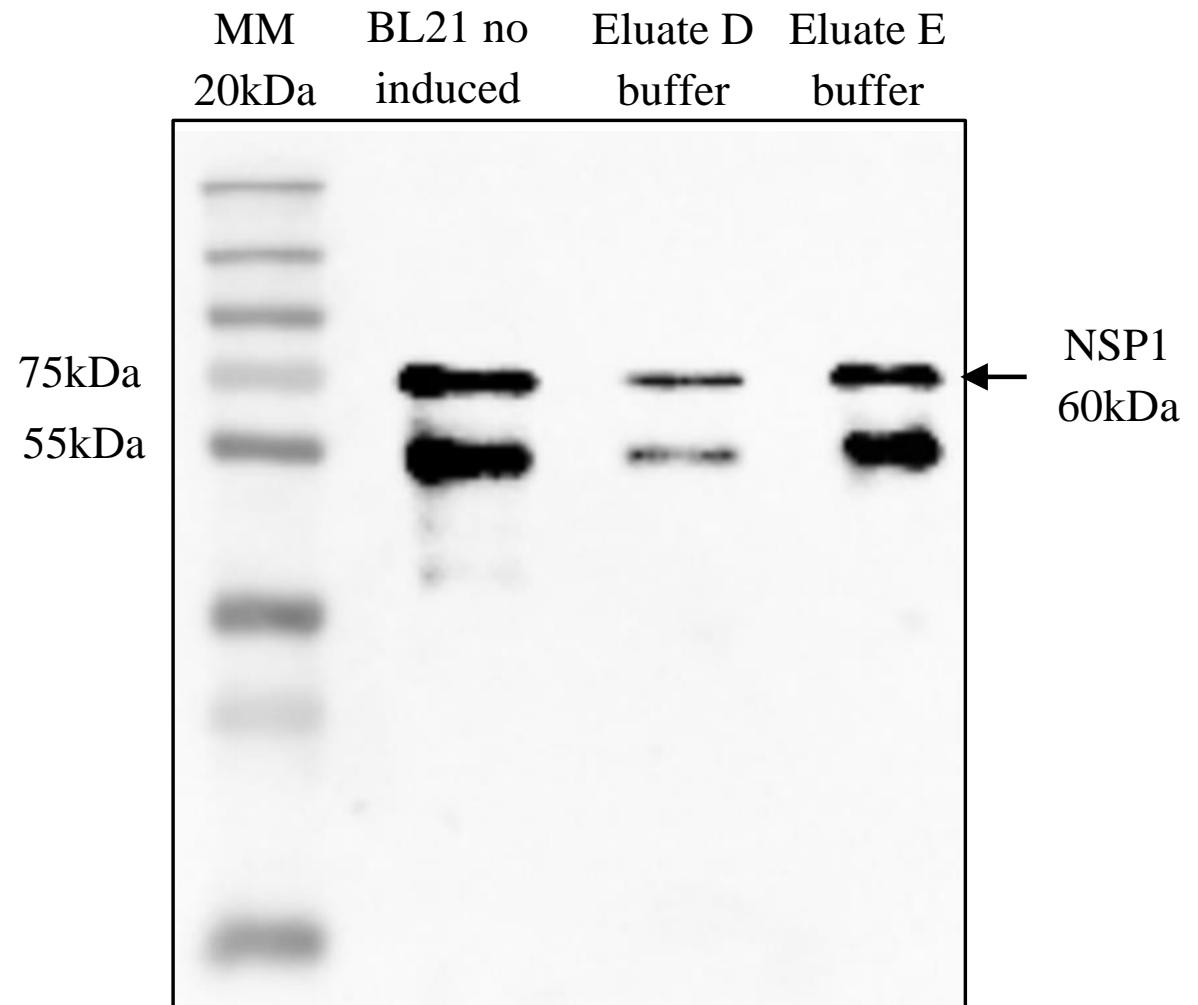

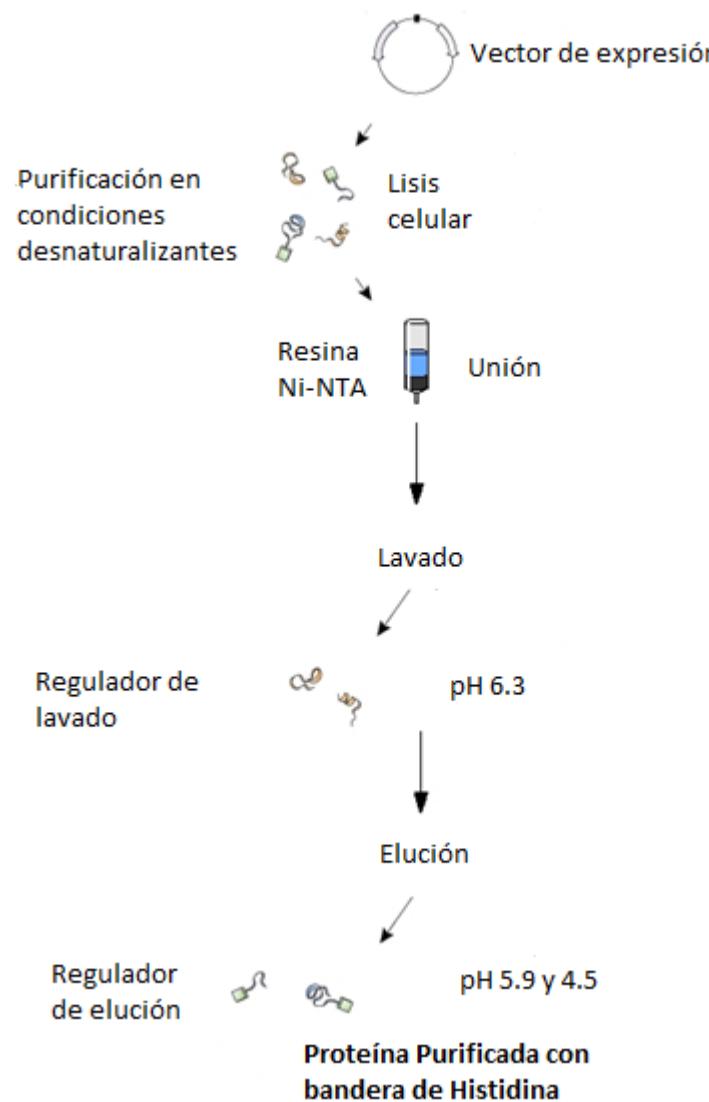

# Electroferograma del plásmido pPROEX Htb y amplicones digeridos con las enzimas de restricción BamHI y XhoI previo a la clonación.

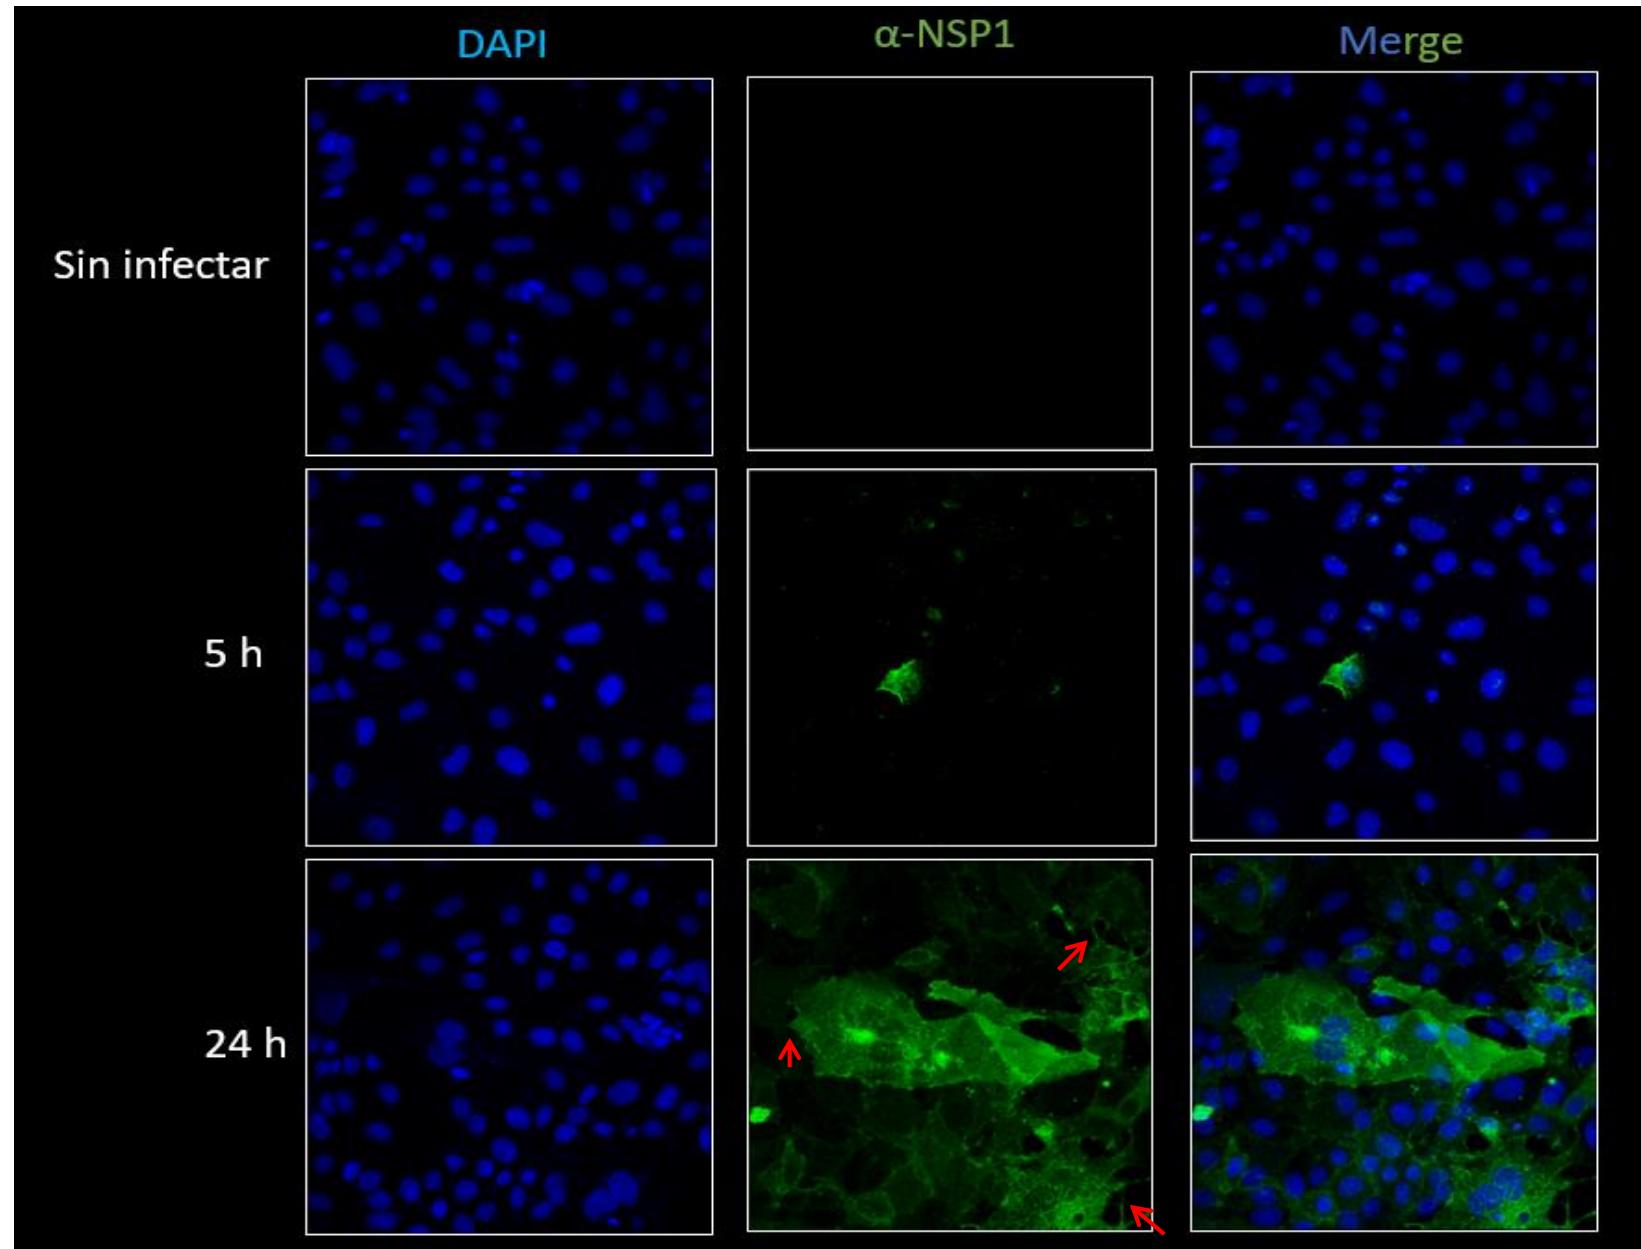

Evaluación de la expresión de la proteína recombinante no estructural 1  
(rNSP). Cinética de expresión de NSP1 en *E. coli*.

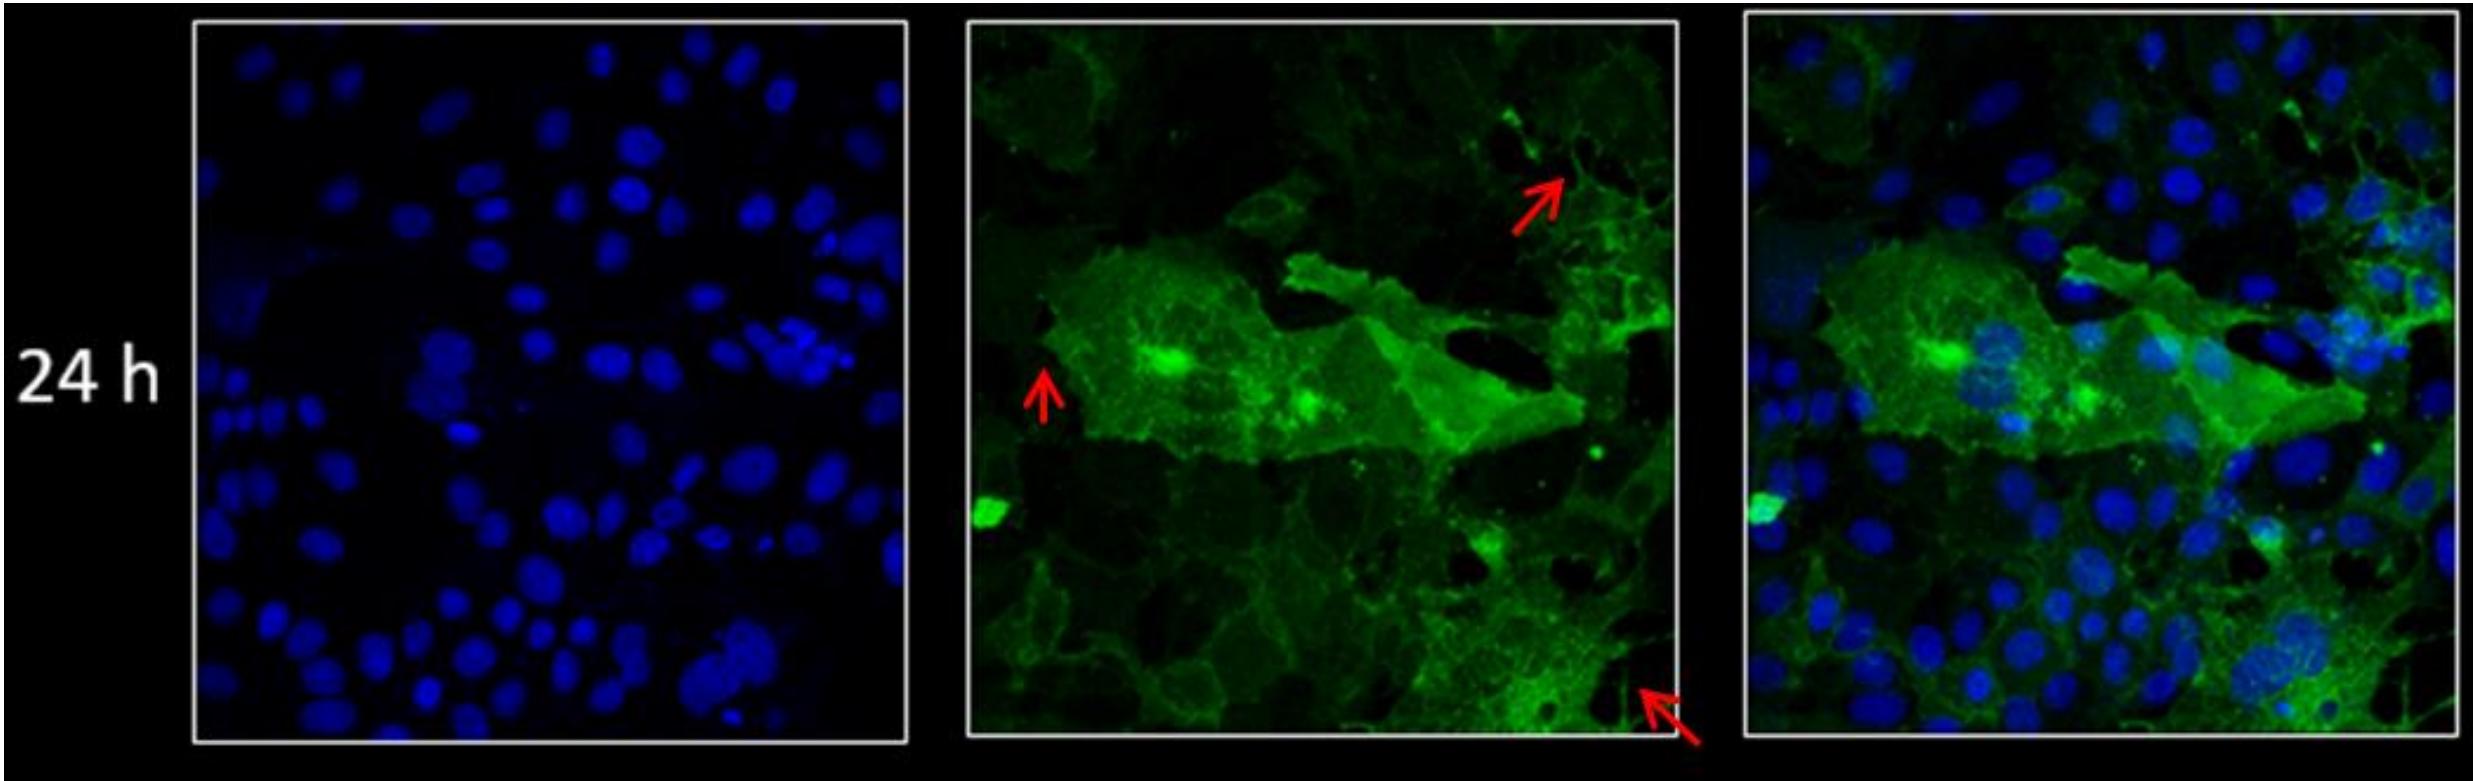

Purificación de NSP1 recombinante de CHIKV utilizando una columna de Ni-NTA. Las fracciones eluidas se analizaron a través de western blot utilizando un anticuerpo anti-His específico.

Reconocimiento específico de la NSP1 en células Vero infectadas con CHIKV que fueron analizadas mediante tinción de inmunofluorescencia a las 5 y 24 h posteriores a la infección.

## Ampliación 24 Post-infección

# Conclusiones

La NSP1 recombinante es una proteína inmunogénica, que nos permite obtener anticuerpos policlonales contra rNSP1 que reconocen la forma nativa de la NSP1.

El antisuero es una herramienta muy útil para estudiar aspectos importantes del ciclo viral del CHIKV.
